HYDRAULIC HOSES STAND

Hydraulic systems are very important to offshore drilling and marine industry. Between 80-90% of all hydraulic system failures are caused by poor fluid condition or leakage.

Over the lifecycle hoses have to be properly managed, traced, handled and replaced when required.

INTERNATIONAL TRAINING CENTER

Depending on the application area of knowledge and practical skills of hydraulic hoses fitters, technical consultants of the International Training Center (ITC) have developed a training program.

The training program and training module have been designed for personnel training purposes in:

- Safety procedure
- Disassembly
- Handling
- Mounting

The special emphasis is given hose tagging, as tagging is an important part of successful maintenance program that reduces downtime while improving the safety of operators and work environment.

Training consists of theoretical and practical parts. Over the training time, participants learn about safety procedures, assembly peculiarities and further support the theory with practical exercises.
