GRIDIN'S GROUP
SINCE 1999

HISTORY

1999 - BEGINNING IN INNOVATIONS

The story of the company starts in 1999 when Aleksandr Gridin along with his associates, who were already experienced in ship repair and rope access, offered to use the method of rope access in ship inspection work. Soon after, this method of inspection work (rope access) was endorsed by classification societies. Original and rational technical solutions were highly appreciated by clients and this served as a good recommendation for the company in its further activity.

2002 – THE FIRST STEPS IN SHIP REPAIR

By 2002 the sphere of the company's activities had expanded. Apart from elevated work, the company began providing complex shipbuilding services. Not having its own ship repair facilities, the company initially began to provide qualitative ship repair works within the Baltic States, and soon after entered West European markets.

2005 – A BREAKTHROUGH IN SHIPBUILDING

The first foreign order was received from Finland in 2005. Its successful implementation not only allowed the company to rise to a higher level in the quality of its ship repair work, but also to assay its abilities in a new sphere of activity – shipbuilding. Work started to be executed at industrial facilities in countries such as Norway, Sweden, Netherlands, Belgium, Austria, Spain, Great Britain, etc.

2006 – INTERNATIONAL TRAINING CENTER

In 2006 a decision on the establishment of a private Gridin‘s Group educational center for training and education in specialities that there was a shortage of was adopted. Over the course of time, the educational center acquired the status of the International Training Center (ITC).

2010 – ALTERNATIVE COURSE

The global economic crisis drove the company management to search for and expand into alternative types of activities, and as a result, the company started providing services for structures involved in wind power engineering and other industrial constructions. It has solidified its positions and has continued to develop its activities in the offshore sector.

ACTIVITIES

Training of technical specialists by following the requirements of potential customers and for the integrated management and execution of various industrial projects.

The Gridin's Group International Training Center (ITC) was founded in 2006 to respond efficiently to the market needs for training and the advanced training of technical specialists having rare specialities. Within 8 years of the International Training Center's (ITC's) existence, more than 4,000 specialists have acquired theoretical knowledge and practical skills within its walls.

For more information, please, visit: www.itc.gridins.com

THE BASIC TRAINING STAGES OF TECHNICAL SPECIALISTS

according to individual customer needs

ANALYSIS OF THE TECHNICAL SPECIFICATIONS AND REQUIREMENTS received from a customer for a specific project. Technical consultants of the Gridin's Group ITC carry out their preliminary work by assessing the specifics and working conditions of the customer's projects.

DEVELOPMENT OF A SPECIALIZED PROGRAM AND TESTS in accordance with the specific requirements of the customer's work, health protection and safety requirements.

CREATION OF SPECIALIZED FACILITIES (SIMULATORS) for practicing the necessary practical skills by using equipment similar to that used at the customer's facilities.

CANDIDATE SELECTION based on specific requirements.

A THEORETICAL TRAINING COURSE and the testing of candidates.

EXERCISE OF THE SPECIALISTS' PRACTICAL SKILLS including simulation and modelling of various work situations.

FINAL EXAMINATION
(if required, attended by a customer representative).

CERTIFICATION of specialists depending on the technical requirements of a customer.

TRAINING OF TECHNICAL SPECIALISTS

in assembling and welding of offshore metal structures

G&G International NV

PROJECT:

Welding of secondary steel of wind generators foundation's transition pieces for the "Northwind" project (Willebroek, Belgium)

SCOPE OF WORK:

- Linkage of coupling rings of foundation pipes in wind turbines;
- Mounting of boat landing units on foundations;
- Welding works on wind turbine foundations.

TRAINING OF TECHNICAL SPECIALISTS

in assembling and welding of various metal structures

LEVATOR OY

PROJECT:

Construction of a high-capacity crane (800 tons) for Kvaerner ASA (Hanko, Finland – fabrication); (Stord, Norway- installation)

SCOPE OF WORK:

- Enlargement of structural sections of the crane for the transportation to the installation site;
- Assembling / welding of the main girder sections;
- Installation of the main girder at the working site;
- Various hull and welding operations at the crane structure.

TRAINING OF TECHNICAL SPECIALISTS

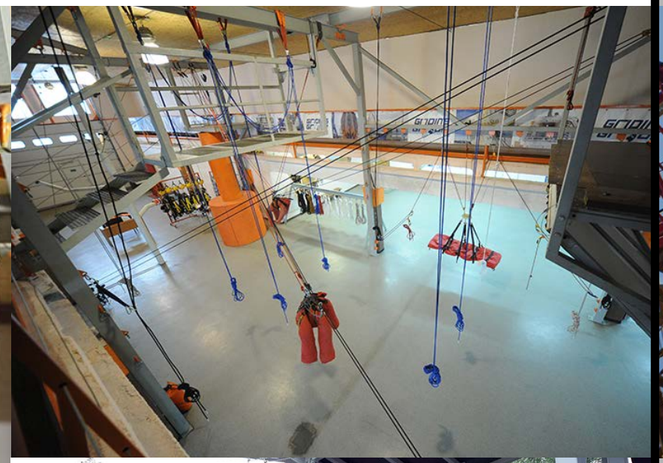

for rope access solutions

GSP Offshore The Netherlands

PROJECT:

Installation works for fitting a ventilation duct on the rig “GSP Saturn” (IJmuiden, the Netherlands)

SCOPE OF WORK:

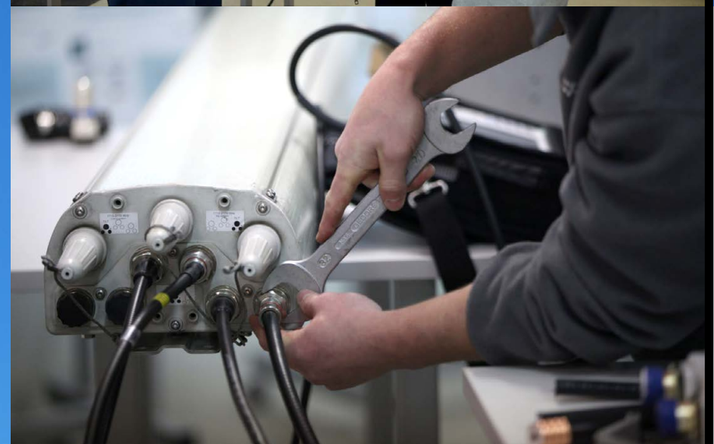

- Welding operations for the deck under the deck-house (Texas deck);
- Installation of a pulley system (height of the work execution is 60-80 m);
- Rigging works for the installation of the elements of the ventilation duct;
- Installation of the sections of the ventilation duct;
- Tightening of flange connections.

TRAINING OF TECHNICAL SPECIALISTS

in the maintenance and installation of mobile communication antennas

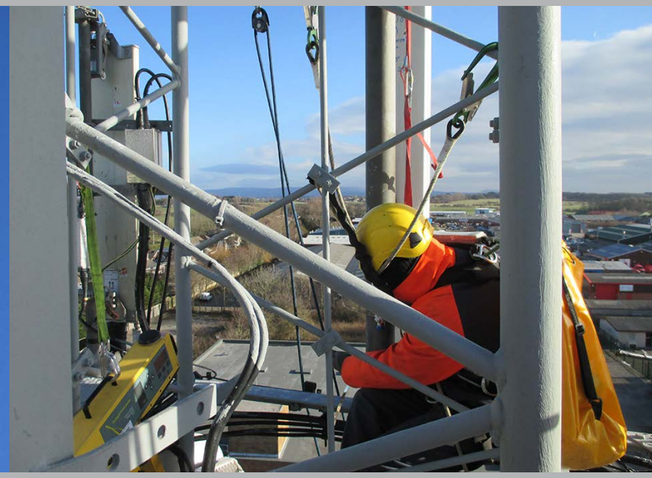

HF Comms

PROJECT:

Mobile antennas assembling works;
Swapping 3G to 4G (United Kingdom)

SCOPE OF WORK:

- Radio wave antennas assembling works;
- Measurement of radio wave antennas;
- Maintenance of mobile antennas.

TRAINING OF TECHNICAL SPECIALISTS

in the maintenance of electrical equipment

BARD Service GmbH

PROJECT:

Various kinds of electrical work on wind turbines during the construction of the wind farm “BARD Offshore 1“, (North Sea, 90 km to the North from the Borkum island)

SCOPE OF WORK:

- Repairs and replacement of electrical equipment;
- Installation of measuring devices;
- Testing of cable insulation. Repair and maintenance of cable routes;
- Electrical work on wind turbines;
- Installation of earthing devices. Maintenance and repair of lightning protection systems.

TRAINING OF TECHNICAL SPECIALISTS

in the coupling and welding of pipelines

AB “AMILINA”

PROJECT:

Installation of a syrup production line at a starch producing enterprise (Panevėžys, Lithuania)

SCOPE OF WORK:

- Fabrication and installation of stainless steel pipes of various diameters, according to the drawings and on site;
- Installation of a drainage system (PVC pipes);
- Fabrication and installation of stainless steel supports, attachment of the supports to reinforced concrete structures;
- Readjustment of tank nozzles;
- Installation of various types of equipment to their regular places and their final installation. Connection of equipment.

TRAINING OF TECHNICAL SPECIALISTS

of rope access for the inspection and repair of wind turbine blades

HYDRO-EKO

PROJECT:

Installation of the “Vestas V-80” (2 MW) wind turbine (Rymanow (Rymanów), Poland)

SCOPE OF WORK:

- Inspection of the wind turbine blades after their delivery to the installation site;
- Compilation of a report on the performed inspection and preparation of a technology for the repair of blades;
- Repair of wind turbine blades;
- Post-installation inspection of blades and submission of a report on the absence of defects.

TRAINING OF TECHNICAL SPECIALISTS

in the maintenance of hydraulic connections

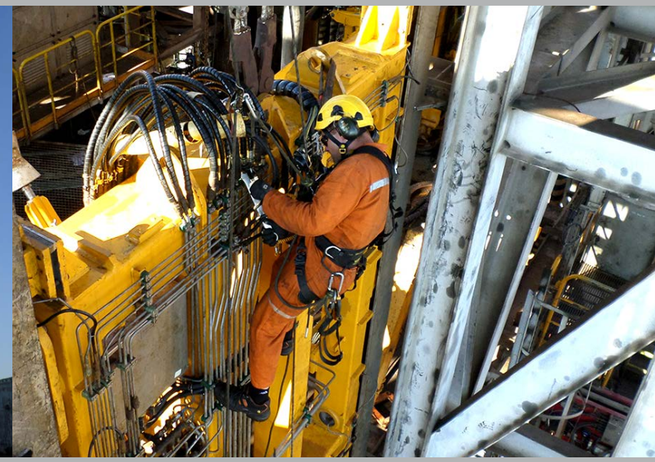

KEEL SOLUTION

PROJECT:

Replacement of the hydraulic hoses on the semi-submersible rig “Maersk Discoverer” (Fincantieri S.P.A, Palermo, Italy)

SCOPE OF WORK:

- Hydraulic hose replacement;
- Hose tagging, downloading data to the database;
- Fixing DENSO tape;
- Replacement of hydraulic pipe clamps;
- Hydraulic oil gathering.

TRAINING OF TECHNICAL SPECIALISTS

in the pre-painting preparation of surfaces and painting

FMT Industrieservice GmbH

PROJECT:

Cleaning and painting of metal structures at the “Nuon Magnum” power station (Eemshaven, the Netherlands)

SCOPE OF WORK:

- High pressure washing of metal structures;
- Mechanical cleaning up to the St-3 level;
- Degreasing of structures;
- Corrosion protection of the skinned areas in accordance with the painting specification;
- Finish painting of structures;
- Associated works (removal / installation of the grating, protection of electrical wiring, etc.).

TRAINING OF TECHNICAL SPECIALISTS

in the inspection by the method of non-destructive testing

Atlantic Marine Services B.V.

PROJECT:

Inspection of the oil rig “Atlantic Labrador” by the method of non-destructive testing
(Esbjerg, North Sea, Denmark)

SCOPE OF WORK:

- Steel constructions thickness gauging in affected areas;
- External inspection and leg survey;
- Hull visual inspection including the bottom survey;
- Inspection of the jack house-to-deck connections;
- Tanks inspection;
- Corrosion protection;
- The limit switches change on deck winches of cranes.

TRAINING OF TECHNICAL SPECIALISTS

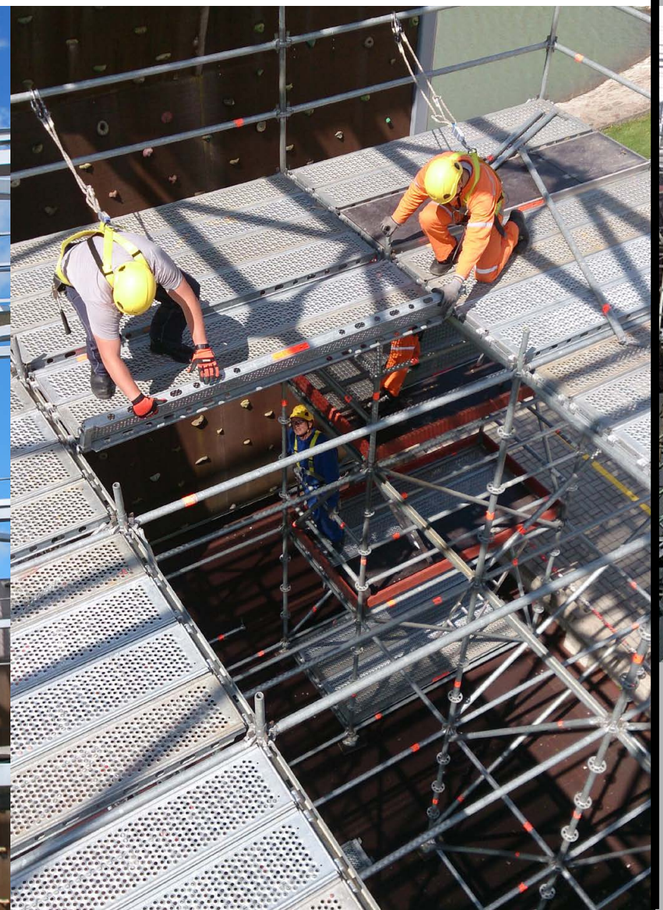

in the maintenance of scaffolds

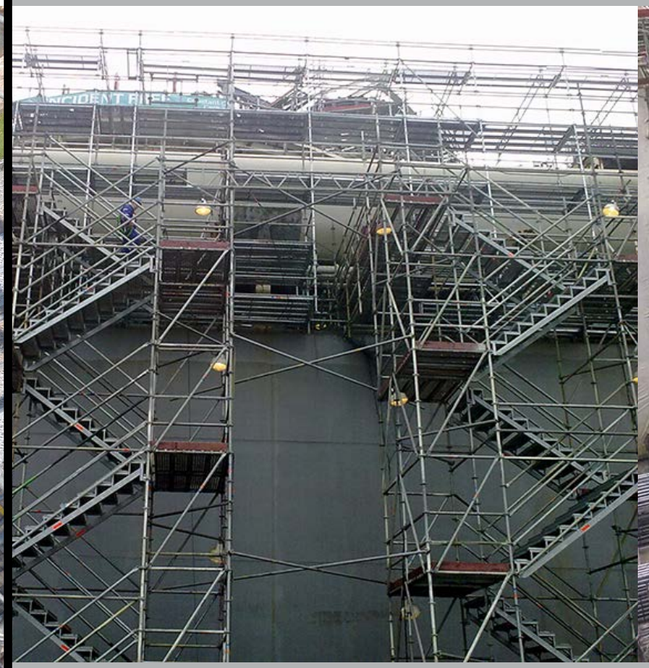

Oranjegroep Holding BV

PROJECT:

Erection / dismantling of scaffolds on vessels under repair at the Damen Shiprepair Rotterdam enterprise (Rotterdam, the Netherlands)

SCOPE OF WORK:

- Erection / dismantling of scaffolds.

TRAINING OF TECHNICAL SPECIALISTS

in the finishing works

PROJECT:

Interior finishing works of cruise vessel “MS Cong Harald”
(Fossen Yard 2670, 7100 Rissa, Norway)

SCOPE OF WORK:

- Preparation works for new finishing installation;
- Wall papering, daubing, painting, tilling works;
- Wall framing and wall installation works;
- Ceiling installation works;
- Removing of old furniture and equipment / new furniture installation.

ON 18 SEPTEMBER 2012 ALEKSANDR GRIDIN'S CHARITY FOUNDATION WAS ESTABLISHED.

The foundation supports and further develops the programs of the Gridin's Group that have been carried out for the last decade. These support programs were initiated by Aleksandr Gridin and are based on valuable co-operation principles in projects of public interest and respect for the individual, society and the environment.

ALEKSANDR GRIDIN FOUNDATION

THE MAIN PURPOSE OF THE FOUNDATION'S ACTIVITY

is to provide integrated support to children, young athletes, support children from less-off families, promote their healthy lifestyle with sports and employment and provide assistance for large families, children of ethnic minorities or the elderly.

Areas of activity:

- Health;
- Sports;
- Social support;
- Active leisure (camps);
- Culture.
