STATE BORDER GUARD SERVICE UNDER THE MINISTRY OF THE INTERIOR OF THE REPUBLIC OF LITHUANIA

– Specialists of the Coast Security Unit

The section of the Lithuanian Republic's border controlled by the VSAT Coast Security Unit is 462 km long. The most advanced technical surveillance systems are mounted on towers which are 30 m in height. Specialists are required to ensure the impeccable operation of the surveillance systems, which means safe climbing up into the tower, carrying out technical inspection of the equipment and replacement of any damaged equipment.

INFORMAL TRAINING

INTERNATIONAL TRAINING CENTER

The Gridin's Group International Training Center (ITC) periodically organizes and conducts training according to various informal training programmes dedicated to the safety of work carried out at height.

The specialists of the Coast Security Unit of the State Border Guard Service (VSAT) under the Ministry of the Interior of the Republic of Lithuania underwent training according to one of the informal training programmes called "Basics of Carrying out Work at Height".

During this training of the Coast Security Unit specialists, special attention was given to the following issues:

- Work safety and health requirements;
- Personal protection equipment, its intended purpose, usage, maintenance and inspection;
- Special features of high-riggers' work and work organization;
- Execution of simple rescue operations.

With regards to the selected (simulated) work situation, practical training was conducted on special high-rise structures, with the attested high-rise work manager participating. The training was devoted to issues regarding safe ascent and descent to the workplace at height as well as carrying out various operations at height.
