GRIDIN'S GROUP

SCAFFOLDING INSTALLATION SERVICES

BEGINNING

Our scaffolding division started when we have received an offer from our Dutch partner to participate in 2 scaffolding projects at RWE and NUON plants, in 2010.

This has allowed us to grow in the market for scaffolding training, development and project management.

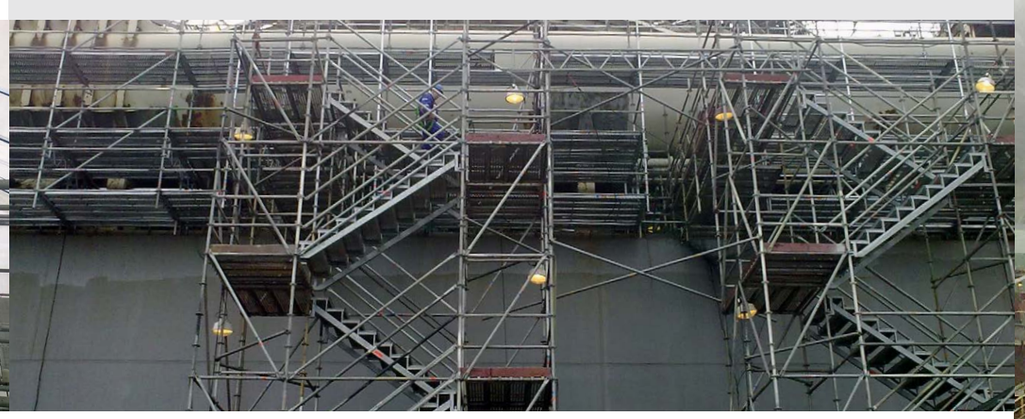

SCAFFOLDING INSTALLATION SERVICES

PROJECTS

- Gjaltema - NUON, RWE (Power Plants) - Eemshaven, NL
- Oranjegroep BV - DOW Chemicals (chemical plant) - Terneuzen, DAMEN Shiprepair yard - Rotterdam, NL
- GSP Offshore - GSP Saturn rig - IJmuiden offshore, NL

PROJECT MANAGEMENT

- Training and assessment of personnel qualifications according to Customers' requirements.
- Managing of personnel on the project.
- Periodical evaluation of personnel qualification, training for qualification and skills improvement.
- Administration and coordination of the project.

SCAFFOLDING INSTALLATION SERVICES

SCAFOLDING TRAINING

In 2010, the International Training Center (ITC) was accredited for compliance with the legal and technical requirements for training scaffolders according to applicable laws.

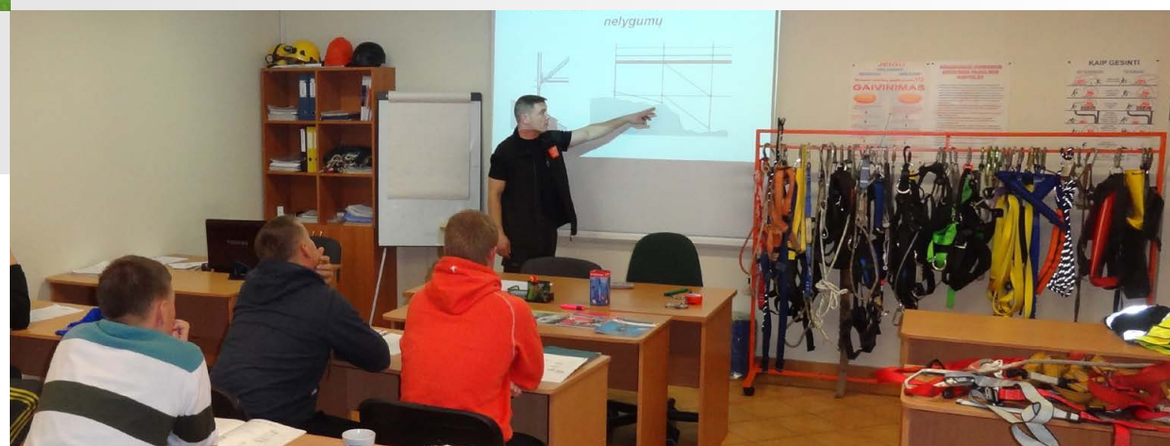

The major part of the training programme consists of practical sessions. The aim of the training is to teach scaffolders to safely and efficiently erect, disassemble and inspect different modules of scaffolding structures.

The training is completed with a qualification examination, after which the trainee is awarded with a qualification certificate.

THE TRAINING PROGRAMMES ARE DEVELOPED BY THE TECHNICAL CONSULTANTS OF THE ITC, REFERRING TO THE KNOWLEDGE AND EXPERIENCE OF THE LARGEST COMPANIES ENGAGED IN THE PRODUCTION OF SCAFFOLDS AND THE TRAINING SYSTEMS OF DIFFERENT EUROPEAN COUNTRIES.

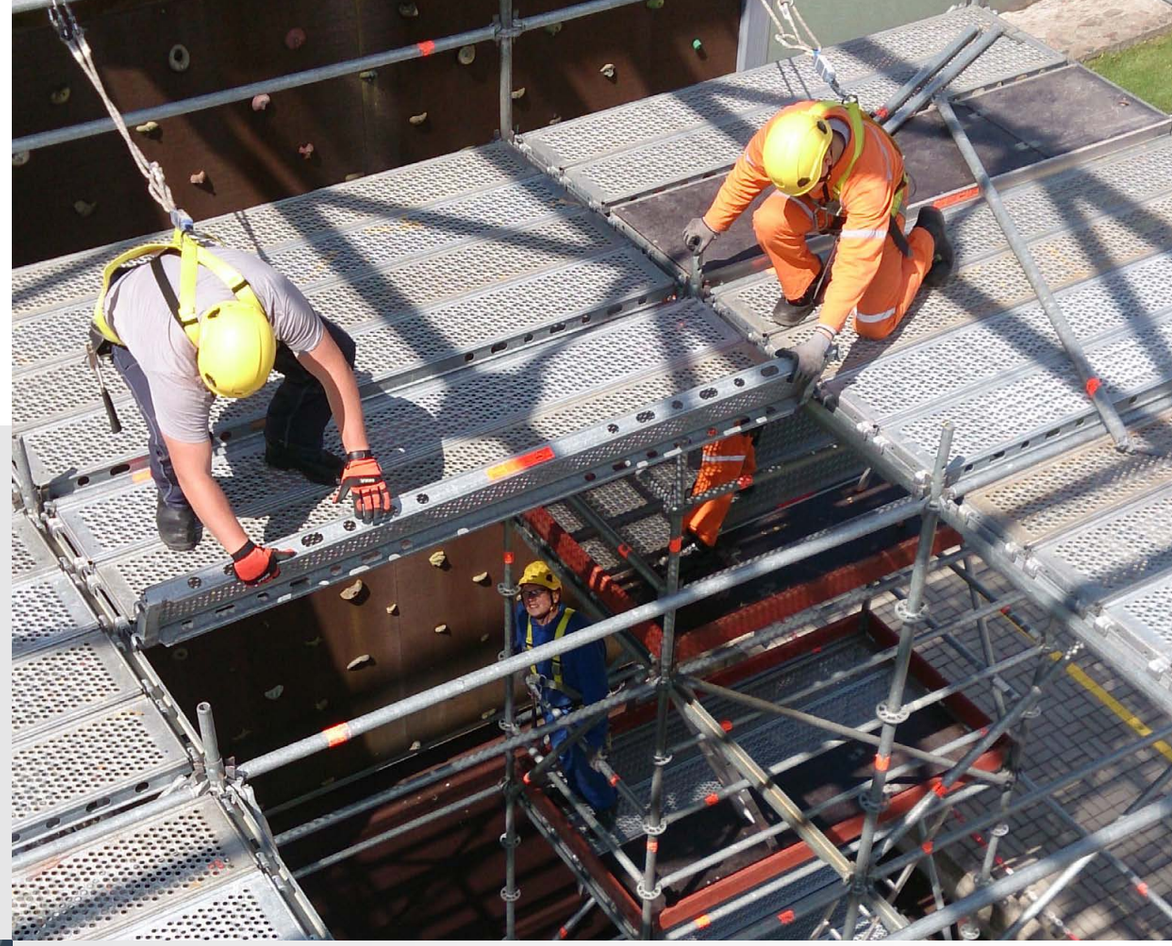

SCAFFOLDING INSTALLATION SERVICES

SCAFOLDING TRAINING: COOPERATION WITH LAYHER BALTIC

Scaffold erection and disassembly work is assigned to the dangerous work category, so scaffolders must know how to erect and disassemble scaffolding and safely work at heights.

The principal goal of the training is to improve the specialists' theoretical knowledge base and consolidate it with practical sessions by simulating different situations at the specialized sites of the training center.

MODULAR AND FRAME FACADE LAYHER SCAFFOLDING SYSTEMS ARE USED FOR THE TRAINING

During the practical sessions,
Layher scaffolding systems are used:

- Facade (SpeedyScaf);
- Modular (Allround).

SCAFFOLDING INSTALLATION SERVICES

OUR STRENGTHS

Our teams are flexible, mobile and can adapt to the requirements of the Customer.

For this purpose we can organize the needed skill training at our training center in Klaipeda, Lithuania.

We can integrate the needed modules into the training program to make sure all Customers' requirements are met.
